

**TREPP CMBS
DELINQUENCY REPORT**

Overall CMBS
Delinquency Rate
Decreased One Basis
Point in August 2026

The Trepp Commercial Mortgage-Backed Securities (CMBS) Delinquency Rate decreased by one basis point to 7.85% in August 2026.

Several large loans became delinquent after failing to pay off at maturity, but their impact was offset by cures, including a large Times Square loan that returned to performing status.

The five largest newly delinquent loans included office towers in Chicago, Los Angeles, and Washington, D.C., an office portfolio spanning Washington, D.C. and Northern Virginia, and a New Orleans hotel. Several were featured in recent editions of TreppWire's Hard Maturities newsletter before their July or August maturity dates.

Non-performing matured balloon loans accounted for 81% of newly delinquent balances, 30-day delinquencies at 13%, and loans in foreclosure at 4%. The Chicago office tower and the Los Angeles office loan moved from performing to non-performing matured balloon status.

The Washington, D.C. office complex, the Washington, D.C. and Northern Virginia office portfolio, and the New Orleans hotel moved directly from current to non-performing matured balloon status. Outside the five property types, a large Times Square loan classified as 'Other' property type moved from non-performing to performing matured balloon status, making it the month's largest cure.

Delinquency rates increased across four of the five major property types, led by lodging and retail, while multifamily was unchanged. Lodging increased 49 basis points to 5.84% after newly delinquent balances from the New Orleans hotel and a national hotel portfolio exceeded the impact of a smaller group of cures. Retail followed with a 24-basis-point increase to 7.20%, driven by newly delinquent regional malls that outweighed cures among other malls returning to performing matured balloon status.

The office rate rose nine basis points to 12.00% as the large newly delinquent loans described above more than offset two sizable loans that left delinquency, including one that resolved directly from foreclosure. Industrial increased one basis point to 1.14% on limited newly delinquent volume. Multifamily held at 7.69% as new 30-day delinquencies across several states were balanced by a similarly broad group of cures.

If loans past their maturity date but current on interest (classified as performing matured balloon) were included, the delinquency rate would register 9.81%, up 19 basis points from July. The seriously delinquent rate (60+ days delinquent, in foreclosure, real estate owned (REO), or non-performing matured balloon) increased 12 basis points to 7.69% from 7.57%.

The share of outstanding loan balance in the 30-day delinquent bucket fell 13 basis points to 0.16% from 0.29% in July. The figures assume defeased loans are included in the denominator unless otherwise specified.

The Overall Numbers

- The overall US CMBS delinquency rate decreased one basis point to 7.85%.
- The percentage of loans that are seriously delinquent (60+ days delinquent, in foreclosure, REO, or non-performing matured balloon) is now 7.69%, up 12 basis points for the month.
- Excluding defeased loans, the overall headline delinquency rate would be 8.04%, down 1 basis point from July.
- One year ago, the overall US CMBS delinquency rate was 7.29%.
- Six months ago, the US CMBS delinquency rate was 7.14%.

WHAT IS THE DIFFERENCE BETWEEN CMBS 1.0 & CMBS 2.0+?

CMBS 1.0 refers to CMBS issued prior to the 2008 financial crisis, characterized by higher loan-to-value ratios and lower debt service coverage ratios. CMBS 2.0+ refers to the second generation of CMBS issued after the financial crisis, incorporating reforms to restore investor confidence. These include enhanced underwriting standards, increased disclosure requirements, improved loan servicing practices, and stronger risk retention rules in compliance with Dodd-Frank regulations.
