

Overall CMBS Delinquency Rate Decreased 20 Basis Points in June 2026

TREPP CMBS DELINQUENCY REPORT

The Trepp Commercial Mortgage-Backed Securities (CMBS) Delinquency Rate decreased by 20 basis points to 7.35% in June 2026, led by a large lodging cure.

The five largest newly delinquent loans accounted for \$998.9 million of the \$2.64 billion in newly delinquent loans, including a super-regional mall in Southern California, a regional mall in New Hampshire, an office complex in New York, a mixed-use tower in Minneapolis, and a Manhattan multifamily property. This month saw non-performing matured balloon loans again dominating the newly delinquent loan list: 65% of newly delinquent balances were non-performing matured balloon loans, while 22% were 30-days delinquent.

At the property-type level, three of the five major property types increased while two moved lower. Retail posted the largest increase, rising 30 basis points to 6.91% as several large regional malls and outlet centers became newly delinquent. Multifamily increased 28 basis points to 7.23%, reversing last month's improvement as several large multifamily assets turned delinquent. Office edged up four basis points to 11.57% as large new central business district delinquencies modestly outpaced cures and payoffs.

Lodging posted the largest decrease, declining 79 basis points to 5.22%, as the cure of a large Florida hotel portfolio loan, which was one of last month's largest new delinquencies, cured in June, and other lodging payoffs far outpaced new lodging delinquencies. Industrial declined 11 basis points to 1.20% as cures and limited new inflows pulled the rate lower. Several new nonperforming matured balloon loans from May shifted to performing matured balloon in June.

If loans past their maturity date but current on interest (classified as performing matured balloon) were included, the delinquency rate would register 9.53%, up thirty-six basis points from May. This figure sits 218 basis points above the headline rate of 7.35% and continues to highlight the role of maturities in overall CMBS performance. The seriously delinquent rate (60+ days delinquent, in foreclosure, real estate owned (REO), or non-performing balloon) decreased, falling to 7.16% from 7.30%.

The percentage of loan balance in the 30-day delinquent bucket is 0.19%, a decrease of six basis points versus May (0.25%).

The figures assume defeased loans are included in the denominator unless otherwise specified.

Source: Trepp

WHAT IS THE DIFFERENCE BETWEEN CMBS 1.0 & CMBS 2.0+?

CMBS 1.0 refers to CMBS issued prior to the 2008 financial crisis, characterized by higher loan-to-value ratios and lower debt service coverage ratios. CMBS 2.0+ refers to the second generation of CMBS issued after the financial crisis, incorporating reforms to restore investor confidence. These include enhanced underwriting standards, increased disclosure requirements, improved loan servicing practices, and stronger risk retention rules in compliance with Dodd-Frank regulations.
