

CMBS Delinquency Report:

Overall Rate Increased One Basis Point

The Trepp CMBS Delinquency Rate increased by one basis point to 7.55% in May 2026.

The five largest newly delinquent loans accounted for \$1.86 billion of the \$4.04 billion in newly delinquent loans, including an Orlando hotel portfolio, a Times Square ground lease loan, a SoHo mixed-use asset, a suburban New Jersey regional mall, and a Richmond CBD office property. This month saw non-performing matured balloon loans again dominating the newly delinquent loan list: 70% of newly delinquent balances had a status of non-performing matured balloon, while 28% were 30-days delinquent, and the remaining 2% were mostly in foreclosure.

At the property-type level, two of the five major property type rates increased while three moved lower. Industrial posted the largest increase, rising 35 basis points to 1.31%, driven by several newly delinquent manufacturing and logistics delinquencies. Retail increased 30 basis points to 6.61% as multiple regional malls and shopping centers became delinquent.

Multifamily posted the largest decrease, declining 76 basis points to 6.95%, reversing April's spike as cures outpaced new delinquencies. Office decreased 16 basis points to 11.53% as cures and payoffs exceeded new inflows despite continued large delinquencies across major CBD assets. Lodging declined 51 basis points to 6.01% even as new delinquencies outpaced cures and payoffs, indicating the rate decline was driven by new originations growing the overall outstanding balance.

If loans past their maturity date but current on interest (classified as performing matured balloon) were included, the delinquency rate would register 9.17%, up eleven basis points

from April. This figure sits 162 basis points above the headline rate of 7.55% and continues to highlight the role of maturities in overall CMBS performance. The seriously delinquent rate (60+ days delinquent, in foreclosure, REO, or non-performing balloons) also increased, rising to 7.30% (from 7.27%).

The percentage of loan balance in the 30-day delinquent bucket is 0.25%, a decrease of two basis points versus April (0.27%).

The figures assume defeased loans are included in the denominator unless otherwise specified.

WHAT IS THE DIFFERENCE BETWEEN CMBS 1.0 & CMBS 2.0+?

CMBS 1.0 refers to CMBS issued prior to the 2008 financial crisis, characterized by higher loan-to-value ratios and lower debt service coverage ratios. CMBS 2.0+ refers to the second generation of CMBS issued after the financial crisis, incorporating reforms to restore investor confidence. These include enhanced underwriting standards, increased disclosure requirements, improved loan servicing practices, and stronger risk retention rules in compliance with Dodd-Frank regulations.
