NORNICKEL

Public Joint Stock Company «Mining and Metallurgical Company «NORILSK NICKEL»
(PJSC "MMC "Norilsk Nickel", "Nornickel" or the "Company")

NORNICKEL ANNOUNCES PRODUCTION RESULTS FOR 1H 2026

Moscow, 27 July 2026 – Nornickel, the world's largest producer of palladium and a major producer of nickel, platinum and copper, announces preliminary consolidated production results for the first half of 2026.

First Vice-President — Chief Operating Officer, Evgeniy Fedorov commented on the operating results:

«In 1H 2026 the output of all key metals decreased, as expected, compared to the same period of last year. The decrease in production was driven by the scheduled equipment repairs, as well as of high base effect of previous period.

In the 2Q 2026 we continue to upgrade the mining equipment fleet as a part of the import substitution program and conduct annual schedule capital maintenance. As example, after a major overhaul, depletion furnace No. 1 at the Nadezhda Metallurgical Plant was restarted ahead of schedule. For the first time, all key furnace components were entirely designed and manufactured by the company's engineers, whereas previously they were imported. This demonstrates the potential for import substitution and creation of an internal competence center capable to replicate this experience across other process stages.

Another significant event was the commissioning of the Norda tunneling system at the Taimyrsky mine at the Norilsk site. The company became a pioneer in the Russian mining industry by using a tunneling system for underground polymetallic ore mining. Its technology will enable mining at great depths without additional ventilation costs and will also improve mining safety.

In Kola we begun the active expansion phase of the Severny mine, reaching a new 730-meter level horizon. The launch of the first complex is scheduled for 2028, which will increase the production by more than 1 million tons of ore to 7 million tons by 2030.

As part of our production chain reconfiguration, the Company plans to consolidate precious metal concentrate production at the Kola site. This will increase metal recovery, speed up the production process, and reduce costs, as the precious metal concentrate production cycle in Monchegorsk is significantly shorter. The project is being implemented using modern solutions and considers all potential environmental impacts. We remain committed to high environmental standards across all our production assets.

The company continues to implement its production efficiency improvement program and reiterates its previously announced production guidance for FY2026».

NORILSK NICKEL GROUP

Nickel

In 2Q 2026, consolidated nickel output increased 4% quarter-on-quarter (q-o-q) to **43 kt.** The increase was driven by the earlier end of the inter-navigation pause in the second quarter, as well as the optimization of repair schedules, which allowed to produce the additional volumes of convert matte.

In 1H 2026, consolidated nickel output decreased 2% year-on-year (y-o-y) to **85 kt**, due to equipment repairs, including a major overhaul of the depletion furnace No. 1 at the Nadezhda Metallurgical Plant (from February to April) and the high base effect in the first half of last year.

Copper

In 2Q 2026, consolidated copper output (including Zabaykalsky Division) increased 6% q-o-q to **104 kt.** The increase was attributed to the lower base of 1Q 2026 due to the redistribution of production volumes of commercial products between periods.

In 1H 2026, total copper output decreased 5% y-o-y **to 203 kt**, due to the need of restocking the volumes of technological work-in-progress material at Copper Plant and high base of the same period of 2025.

In 2Q 2026, copper output in concentrate at Zabaykalsky Division decreased 4% q-o-q to **18 kt** due to scheduled maintenance on the autogenous grinding mill. **In 1H 2026**, production of copper in concentrate at Zabaykalsky Division increased 2% y-o-y to **36 kt** due to increased copper recovery due to higher metal content in the ore.

Platinum Group Metals

In 2Q 2026, platinum production increased 7% q-o-q to **145 koz**, while palladium production decreased 3% q-o-q to **590 koz**. The multidirectional dynamics was attributed to a change in the platinum-to-palladium ratio in mined ore amid a shift in the composition of processed feedstock.

In 1H 2026, platinum and palladium output amounted to **281 koz** (-16% y-o-y) and **1,199 koz** (-14% y-o-y), respectively. The decline was due to factors similar to those described above for copper, as well as a change in the metal composition of processed feedstock.

Production Guidance from the Company's Feedstock for 2026

Metal	Volume
Norilsk Nickel Group (excluding Zabaykalsky Division)	
Nickel, kt	193 – 203
Copper, kt	336 – 356
Palladium, koz	2,415 – 2,465
Platinum, koz	616 – 636
Zabaykalsky Division	
Cu (copper in concentrate), kt	69 – 73

Norilsk Nickel Group Saleable Metals Production

Saleable metals production	2Q 2026	1Q 2026	Q-o-Q	1H 2026	1H 2025	Y-o-Y
Norilsk Nickel Group[1]						
Total nickel, t	43,282	41,746	4%	85,028	86,850	-2%
Total copper, t	104,394	98,679	6%	203,073	213,189	-5%
Total palladium, koz	590	608	-3%	1,199	1,399	-14%
Total platinum, koz	145	136	7%	281	335	-16%
including Zabaykalsky Division						
Copper (in copper concentrate), t	17,787	18,545	-4%	36,332	35,686	2%

ABOUT THE COMPANY

MMC Norilsk Nickel is a diversified mining and metallurgical company, the world's largest producer of palladium and a major producer of nickel, platinum, cobalt, copper and rhodium. The company also produces silver, gold, iridium, ruthenium, selenium and other products.

The main production units of Norilsk Nickel Group are located at the Norilsk Industrial District, on the Kola Peninsula and Zabaykalsky Krai in Russia.

MMC Norilsk Nickel shares are listed on the Moscow Stock Exchange.
